SKILLS

PROGRAMMING

Python Java JavaScript
Shell Scripting

BACKEND

FastAPI Flask Django
Spring Boot REST APIs
Microservices

FRONTEND

React Next.js HTML
CSS

DATA & AUTOMATION

NumPy Pandas
Automation Scripts

CLOUD & DEVOPS

Docker Kubernetes
Google Cloud
GitHub Actions Linux

DATABASES

PostgreSQL MySQL
MongoDB Redis

EDUCATION

MCA — Master of Computer Applications

Kongu Engineering College,
Erode
10/2021 – 04/2023

B.Sc Computer Science

Thiagarajar College, Madurai
04/2018 – 05/2021

CERTIFICATES

RHCSA — Red Hat Certified System Administrator (EX200)

ID: 210-048-773 · 2021

AI Agents Intensive Course

Google · 2024

LANGUAGES

Tamil English

SUMMARY

Backend-leaning full-stack engineer with **3+ years at Zoho**, building Python and Java services — **REST APIs, microservices**, and a shared API gateway — with React/Next.js frontends. Ships and operates production systems end to end with **Docker, CI/CD**, and self-hosted infrastructure.

EXPERIENCE

Software Development Engineer

06/2023 – Present

Zoho Corporation · Chennai

- Built a CLI-based **server configuration and deployment automation** tool in Python and Shell, simplifying setup and releases for the whole team.
- Cut developer cycle time by **~40%** by streamlining environment setup, code changes, and testing loops.
- Developed backend components for a shared **API gateway** integrating **10+ external systems**, standardizing CRUD operations and reducing maintenance complexity.
- Implemented **real-time data synchronization** across interconnected services, improving data accuracy and eliminating manual intervention.

Software Development Engineer — Intern

02/2021 – 06/2023

Zoho Corporation · Chennai

- Co-built a full-stack **project management tool** adopted by **200+ internal users**, developing backend APIs and UI components.
- Diagnosed and fixed **30+ production issues**, strengthening debugging and root-cause analysis skills.
- Automated repetitive integration steps, significantly reducing service **integration time**.

PROJECTS

Academic Suite — Exam Controller

2026

FastAPI · React/TypeScript · PostgreSQL · Redis · Docker

- Built a full-stack platform automating **marksheets, hall-ticket, and report generation** for PG/UG/Diploma programs — pixel-accurate PDFs (A4/Legal/A5) rendered from Jinja2 templates.
- Designed a unified **grading engine** covering three academic systems with **Strategy + Factory** patterns, keeping program rules isolated and extensible.
- Served two role-aware React frontends from one **FastAPI** backend: staff portal with granular **RBAC** and time-windowed marks entry; student portal with tab-scoped **JWT** and AES-GCM-encrypted sessions.
- Modeled the data layer on **PostgreSQL** with typed SQLAlchemy 2.0 and a repository pattern; **Dockerized** and self-deployed on a VPS with backups and monitoring.

Marksheet Management System

07/2021 – 10/2021

- Flask** + Bootstrap web app generating student marksheets — in **production use for 5 years** at the institution before being rebuilt as Academic Suite.

Password Manager — Web & Desktop

09/2020 – 12/2020

- Python password manager with **PyQt5** desktop and **Flask** web clients, backed by MongoDB/Firebase.
